# Sentinel Check Navigator

ANS **Think Bigger.**

What are ANS navigators?

Navigators are engagements that provide you with the resources and information to be able to realise your long-term strategic vision and steer your digital transformation journey.

# What is the Sentinel Check Navigator?

Our Sentinel Check Navigator will ensure your security operations tooling is optimised, configured to best practice and above all, is providing the support you need to detect and combat the increasingly sophisticated threat landscape.

We will provide an assessment to understand how your Microsoft Sentinel platform has been deployed, configured, optimised and is used with your security operations processes and teams. Once this assessment has been completed you'll be in a position to drive innovation, increase risk management and reduce the threat landscape through the adoption of modern techniques and services from within the Microsoft Sentinel platform.

Who is this suitable for?

This Navigator has been designed for organisations that have already deployed Microsoft Sentinel. If you'd like to ensure your Sentinel environment is configured to best practice, is costing what it should and is optimised, this Navigator is ideal. You may have limited resources to manage and maintain your Sentinel platform or you might not be getting the benefits you expected, either way, you've come to the right place!

What outcomes can I expect?

Once the Sentinel Check Navigator is complete, you'll get a set of recommendations and guidance to further enhance, optimise and drive modernisation, through automation, orchestration and operational tooling from within the platform, thus driving the efficiency of the security operations team. You'll also have a clear understanding of where the environment can be monitored and managed more effectively through driving relevancy and also drive costs down from the Microsoft Sentinel platform.

Optimise security operations

We look at where security operations can be improved and optimised.

Reduce costs

We will provide an analysis of where costs can be reduced through platform efficiencies.

Improve use case management

Understand how effective your use cases are and whether to retire, update or introduce new ones.

Understand feature options

Understand what features existing and new could be adopted to improve the security operations function.

Map against MITRE ATT&CK

We will observe how effective the detection rules and playbooks are against the MITRE ATT&CK framework and see what is required to strengthen your ability to identify attacks.

Understand Relevancy

Understand through use case management and feature adoption how more relevant the platform can be tuned to drive efficiencies, effectiveness and cost.

What are the benefits of using an ANS Navigator?

Rapid time to value

It typically takes 4-6 weeks to complete this Navigator, and usually doesn't require more than 10 hours of your time spread over those weeks.

Board ready outputs

We will provide you with board ready outputs, a strategy document, business base and presentation.

Unlock Microsoft funding

If you undertake this journey with ANS, you are more likely to be able to unlock funding from Microsoft to help deliver on your modern security platform.
